# Table of Contents

## Volume I
Core Technical Requirements and Site Planning

### Chapter 1 - Introduction

1.1 Objective........................................................................................................... 1-1
1.2 Applicability to City of Olympia ................................................................. 1-2
1.3 Overview of Manual Content............................................................................. 1-2
   1.3.1 Volume Content........................................................................................... 1-3
   1.3.2 Organization of Volume I............................................................................. 1-3
1.4 How to Use this Manual................................................................................ 1-3
1.5 Development of Best Management Practices for Stormwater Management.... 1-3
   1.5.1 Best Management Practices (BMPs).......................................................... 1-3
   1.5.2 Source Control BMPs ................................................................................. 1-4
   1.5.3 Treatment BMPs.......................................................................................... 1-4
   1.5.4 Flow Control BMPs.................................................................................... 1-4
   1.5.5 Construction Stormwater BMPs and On-site Stormwater Management BMPs. 1-5
1.6 Relationship of this Manual to Federal, State, and Local Regulatory Requirements ...... 1-5
   1.6.1 The Manual’s Role as Technical Guidance............................................. 1-5
   1.6.2 More Stringent Measures and Retrofitting .......................................... 1-6
   1.6.3 Presumptive versus Demonstrative Approaches to Protecting Water Quality.. 1-6
   1.6.4 The Puget Sound Action Agenda ............................................................ 1-9
   1.6.7 Industrial Stormwater General Permit ................................................. 1-10
   1.6.9 Construction Stormwater General Permit............................................ 1-10
   1.6.10 Endangered Species Act...................................................................... 1-11
   1.6.11 Section 401 Water Quality Certifications............................................ 1-11
   1.6.12 Hydraulic Project Approvals (HPAs)....................................................... 1-12
   1.6.13 Aquatic Lands Use Authorizations...................................................... 1-12
   1.6.14 Requirements Identified through Watershed/Basin Planning or Total
         Maximum Daily Loads.................................................................................. 1-12
   1.6.15 Underground Injection Control Authorizations................................. 1-12
1.7 Effects of Urbanization ................................................................................... 1-13
   1.7.1 Background Conditions........................................................................... 1-13
   1.7.2 Hydraulic Changes..................................................................................... 1-13
   1.7.3 Water Quality Changes............................................................................. 1-15
   1.7.4 Biological Changes.................................................................................... 1-16
   1.7.5 The Role of Land Use and Lifestyles....................................................... 1-17
Chapter 2 - Core Requirements for New Development and Redevelopment

2.1 Relationship to Municipal Stormwater Permits .............................................................. 2-2
2.2 Exemptions ...................................................................................................................... 2-2
2.3 Definitions Related to Core Requirements ...................................................................... 2-3
2.4 Applicability of the Core Requirements ........................................................................... 2-3
  2.4.1 New Development.............................................................................................. 2-6
  2.4.2 Redevelopment................................................................................................... 2-6
2.5 Core Requirements .......................................................................................................... 2-8
  2.5.1 Core Requirement #1: Preparation of Drainage Control Plans .......................... 2-8
  2.5.2 Core Requirement #2: Construction Stormwater Pollution
  Prevention (SWPP) .............................................................................................. 2-9
  2.5.3 Core Requirement #3: Source Control of Pollution ............................................ 2-16
  2.5.4 Core Requirement #4: Preservation of Natural Drainage Systems and Outfalls .......................................................... 2-17
  2.5.5 Core Requirement #5: On-site Stormwater Management ........................................ 2-18
  2.5.6 Core Requirement #6: Runoff Treatment........................................................... 2-23
  2.5.7 Core Requirement #7: Flow Control ................................................................... 2-25
  2.5.8 Core Requirement #8: Wetlands Protection ...................................................... 2-28
  2.5.9 Core Requirement #9: Operation and Maintenance .......................................... 2-29
2.6 Additional Requirements ................................................................................................. 2-30
  2.6.1 Financial Liability................................................................................................. 2-30
  2.6.2 Offsite Analysis and Mitigation ........................................................................... 2-31
2.7 Adjustments ..................................................................................................................... 2-33
2.8 Exceptions........................................................................................................................ 2-33

Chapter 3 – Drainage Control Plan Submittal Requirements

3.1 Projects and Activities Requiring Plan Submittal................................................................ 3-1
3.2 Abbreviated Drainage Plans............................................................................................ 3-2
  3.2.1 Abbreviated Drainage Plans – Plan Requirements .................................................. 3-2
  3.2.2 Abbreviated Drainage Plans – Critical Areas Requirements ..................................... 3-3
  3.2.3 Abbreviated Drainage Plans – Written Summary, Supporting Documents, and Calculations ............................................................................................................................. 3-3
  3.2.4 Abbreviated Drainage Plans – Licensed Engineer Required for Roads...................... 3-3
  3.2.5 Abbreviated Drainage Plans – Drawing Size and Quality........................................ 3-3
  3.2.6 Abbreviated Drainage Plans – Site Development Drawings ...................................... 3-3
  3.2.7 Abbreviated Drainage Plans – Construction SWPPP Requirements ...................... 3-5
  3.2.8 Abbreviated Drainage Plans – Soils Report Requirements ........................................ 3-5
3.3 Drainage Control Plans .................................................................................................... 3-5
  3.3.1 Phased Project Submittals .................................................................................. 3-6
  3.3.2 Drainage Control Plan – Site Development Drawing Requirements ...................... 3-6
3.3.3 Drainage Control Plan – Drainage Design Report Requirements .......................... 3-10
3.3.4 Drainage Control Plan – Construction SWPPP Report ........................................ 3-17
3.3.5 Drainage Control Plan – Stormwater Site Management Plan .............................. 3-17
3.4 Drainage Control Plan Preparation: Step-By-Step Process .................................... 3-18
3.4.1 Step 1 – Site Analysis: Collect and Analyze Information on Existing Conditions .. 3-18
3.4.2 Step 2 – Prepare Preliminary Development Layout ........................................... 3-22
3.4.3 Step 3 – Perform an Off-site Analysis ................................................................. 3-22
3.4.4 Step 4 – Determine and Read the Applicable Core Requirements ..................... 3-22
3.4.5 Step 5 – Prepare Site Development Drawings and Drainage Design Report ....... 3-22
3.4.6 Step 6 – Prepare a Construction Stormwater Pollution Prevention Plan ......... 3-23
3.4.7 Step 7 – Prepare the Stormwater Site Management Plan ..................................... 3-23
3.4.8 Step 8 – Finalize the Drainage Control Plan or Abbreviated Drainage Plan ...... 3-24

Chapter 4 - BMP and Facility Selection Process for Drainage Control Plans

4.1 Purpose ...................................................................................................................... 4-1
4.2 BMP and Facility Selection Process ......................................................................... 4-1

Tables
Table 1.7.1 Mean Concentrations of Selected Pollutants in Runoff from Different Land Uses .............................................................. 1-15
Table 2.5.1 On-site Stormwater Management Requirements for Projects Triggering Core Requirements #1 - #9 .............................................. 2-19

Figures
Figure 1.6.1 Relation Between Environmental Science and Standards in Regulations. .......... 1-8
Figure 1.7.1 Changes in Hydrology after Development ........................................... 1-14
Figure 1.7.2 Channel Stability and Land Use: Hylebos, East Lake Sammamish, Issaquah Basins .......................... 1-14
Figure 1.7.3 Relationship Between Basin Development and Biotic Integrity in Puget Sound Lowland Streams ...................................................... 1-17
Figure 2.4.1 Flow Chart for Determining Requirements for New Development ............. 2-4
Figure 2.4.2 Flow Chart for Determining Requirements for Redevelopment .......... 2-5
Figure 2.5.1 Flow Chart for Determining LID CR #5 Requirements .......................... 2-22
Figure 2.5.2 Potential Direct Discharge Area ......................................................... 2-26

## Volume II

### Construction Stormwater Pollution Prevention

(Sediment and Erosion Control BMPs)

#### Chapter 1 – Introduction to Construction Stormwater Pollution Prevention

1.1 Purpose of this Volume ................................................................. 1-1
1.2 Content, Organization and Use of this Volume .............................. 1-1
1.3 Thirteen Elements of Construction Stormwater Pollution Prevention 1-2
1.4 Erosion and Sedimentation Impacts .............................................. 1-3
1.5 Erosion and Sedimentation Processes ........................................... 1-3
   1.5.1 Soil Erosion ........................................................................ 1-3
   1.5.2 Sedimentation .................................................................... 1-4
1.6 Factors Influencing Erosion Potential ......................................... 1-5
   1.6.1 Soil Characteristics ........................................................... 1-5
   1.6.2 Vegetative Cover ............................................................... 1-6
   1.6.3 Topography ........................................................................ 1-6
   1.6.4 Climate ............................................................................. 1-6

#### Chapter 2 - Regulatory Requirements

2.1 The Construction Stormwater General Permit ............................... 2-1
2.2 Construction Stormwater Pollution Prevention Plans .................. 2-3
2.3 Water Quality Standards ............................................................. 2-3
   2.3.1 Surface Water Quality Standards ...................................... 2-3
   2.3.2 Compliance with Standards .............................................. 2-4
2.4 Endangered Species Act ............................................................... 2-4
2.5 Other Applicable Regulations and Permits .................................... 2-5

#### Chapter 3 - Planning

3.1 General Guidelines ................................................................. 3-1
   3.1.1 What is a Construction SWPPP? ......................................... 3-1
   3.1.2 Who is Responsible for the Construction SWPP? .................. 3-1
   3.1.3 What is an Adequate Plan? ................................................ 3-2
   3.1.4 BMP Standards and Specifications ................................... 3-2
   3.1.5 General Principles .......................................................... 3-3
3.2 Construction SWPPP Requirements ........................................... 3-3
   3.2.1 Narrative ........................................................................ 3-3
   3.2.2 Drawings ........................................................................ 3-4
3.3 Step-By-Step Procedure .............................................................. 3-5
   3.3.1 Step 1 – Data Collection .................................................. 3-6
   3.3.2 Step 2 – Data Analysis ...................................................... 3-7
   3.3.3 Step 3 – Construction SWPPP Development and Implementation 3-8

## Volume III

### Hydrologic Analysis and Flow Control BMPs

---

### Chapter 1 – Introduction

1.1 Purpose of this Volume ................................................................. 1-1  
1.2 Content and Organization of this Volume ........................................ 1-1  
1.3 How to Use This Volume ................................................................. 1-1  

### Chapter 2 - Hydrologic Analysis

2.1 Minimum Computational Standards .................................................. 2-1  
   2.1.1 Discussion of Hydrologic Analysis Methods Used for Designing BMPs 2-2  
2.2 Western Washington Hydrology Model ............................................. 2-4  
   2.2.1 Limitations to the WWHM ......................................................... 2-4  
   2.2.2 Assumptions made in creating the WWHM ................................. 2-4  
   2.2.3 Guidance for flow-related standards ........................................... 2-7  
2.3 Single Event Hydrograph Method ..................................................... 2-7  
   2.3.1 Water Quality Design Storm ..................................................... 2-7  
   2.3.2 Runoff Parameters ................................................................. 2-8  
2.4 Closed Depression Analysis ............................................................ 2-13  

### Chapter 3 - Flow Control Design

3.1 Roof Downspout Controls ............................................................... 3-1  
   3.1.1 Downspout Full Infiltration Systems (BMP T5.10A) ....................... 3-4  
   3.1.2 Downspout Dispersion Systems (BMP T5.10B) ............................. 3-10  
   3.1.3 Perforated Stub-Out Connections (BMP T5.10C) ............................ 3-15  
3.2 Detention Facilities ........................................................................ 3-17  
   3.2.1 Detention Ponds ................................................................. 3-17  
   3.2.2 Detention Tanks ................................................................. 3-32  
   3.2.3 Detention Vaults ................................................................. 3-36  
   3.2.4 Control Structures ............................................................... 3-40  
   3.2.5 Other Detention Options ......................................................... 3-51  
3.3 Infiltration Facilities for Flow Control and for Treatment ............... 3-51  
   3.3.1 Purpose ................................................................. 3-51  
   3.3.2 Description ................................................................. 3-52  
   3.3.3 Applications ................................................................. 3-52  
   3.3.4 Steps for the Design of Infiltration Facilities – Simplified Approach 3-74  
   3.3.5 Site Characterization Criteria .................................................. 3-77  
   3.3.6 Saturated Potential Hydraulic Conductivity and Design Infiltration Rate Determination .................................................. 3-79  
   3.3.7 Site Suitability Criteria (SSC) .................................................. 3-84

Permanent Stormwater Site Management

## Chapter 1 – Introduction
1.1 Purpose of this Volume  
1.2 Content and Organization of this Volume  
1.3 How to Use this Volume

## Chapter 2 – Stormwater Site Management Plans
2.1 Responsibility to Maintain Stormwater Facilities  
2.1.1 Stormwater Site Management Plans  
2.1.2 Site Inspection and Reporting Requirements  
2.2 Preparation of Stormwater Site Management Plans  
2.2.1 Plan Format and Requirements

## Chapter 3 – Stormwater Pollution Source Control
3.1 Source Control of Pollution  
3.1.1 Pollutants Targeted  
3.2 Operational and Structural Source Control BMPs  
3.3 Treatment BMPs for Specific Pollutant Sources  
3.4 Distinction between Applicable and Recommended BMPs  
3.4.1 Applicable (Mandatory) BMPs  
3.4.2 Recommended BMPs  
3.5 Regulatory Requirements Affecting Stormwater Pollutant Control  
3.6 Preparing a Pollution Source Control Program  
3.6.1 Steps for Preparing a Pollution Source Control Program  
3.6.2 Applicable (Mandatory) Operational Source Control BMPs for all Sites  
3.6.3 Pollutant Source-Specific Activities and BMPs  
   S401 BMPs for Building, Repair, and Maintenance of Boats and Ships  
   S402 BMPs for Commercial Animal Handling Areas  
   S403 BMPs for Commercial Composting  
   S404 BMPs for Commercial Printing Operations  
   S405 BMPs for Deicing and Anti-Icing Operations - Airports and Streets  
   S406 BMPs for Streets/Highways  
   S407 BMPs for Dust Control at Disturbed Land Areas and Unpaved Roadways and Parking Lots  
   S408 BMPs for Dust Control at Manufacturing Areas  
   S409 BMPs for Fueling at Dedicated Stations  
   S410 BMPs for Illicit Connections to Storm Drains
| S411 | BMPs for Landscaping and Lawn/Vegetation Management ........................................ 3-25 |
| S412 | BMPs for Loading and Unloading Areas for Liquid or Solid Material .......................... 3-30 |
| S413 | BMPs for Log Sorting and Handling ........................................................................... 3-34 |
| S414 | BMPs for Maintenance and Repair of Vehicles and Equipment .................................... 3-35 |
| S415 | BMPs for Maintenance of Public and Private Utility Corridors and Facilities ............... 3-37 |
| S416 | BMPs for Maintenance of Roadside Ditches .................................................................. 3-39 |
| S417 | BMPs for Maintenance of Stormwater Drainage and Treatment Systems .................... 3-41 |
| S418 | BMPs for Manufacturing Activities - Outside ............................................................. 3-43 |
| S419 | BMPs for Mobile Fueling of Vehicles and Heavy Equipment ....................................... 3-45 |
| S420 | BMPs for Painting/Finishing/Coating of Vehicles/Boats/Buildings/Equipment ............... 3-47 |
| S421 | BMPs for Parking and Storage Vehicles and Equipment .............................................. 3-48 |
| S422 | BMPs for Railroad Yards ............................................................................................ 3-49 |
| S423 | BMPs for Recyclers and Scrap Yards .......................................................................... 3-50 |
| S424 | BMPs for Roof/Building Drains at Manufacturing and Commercial Buildings .............. 3-51 |
| S425 | BMPs for Soil Erosion and Sediment Control at Industrial Sites .................................. 3-52 |
| S426 | BMPs for Spills of Oil and Hazardous Substances ....................................................... 3-53 |
| S427 | BMPs for Storage of Liquid, Food Waste, or Dangerous Waste Containers .................. 3-55 |
| S428 | BMPs for Storage of Liquids in Permanent Aboveground Tanks .................................... 3-58 |
| S429 | BMPs for Storage or Transfer (Outside) of Solid Raw Materials, By-Products, or Finished Products ................................................................. 3-60 |
| S430 | BMPs for Urban Streets .............................................................................................. 3-63 |
| S431 | BMPs for Washing and Steam Cleaning Vehicles/Equipment/Building Structures .......... 3-65 |
| S432 | BMPs for Wood Treatment Areas ............................................................................... 3-67 |
| S433 | BMPs for Pools, Spas, Hot Tubs, and Fountains ........................................................... 3-69 |
| S434 | BMPs for Cleaning or Washing of Tools, Engines, and Manufacturing Equipment ......... 3-71 |
| S435 | BMPs for Cleaning or Washing of Cooking Equipment ................................................. 3-74 |
| S436 | BMPs for Collection and Disposal of Wastewater in Mobile Interior Washing Operations ................................................................................................. 3-76 |
| S437 | BMPs for Concrete and Asphalt Mixing and Production at Stationary Sites ................ 3-77 |
| S438 | BMPs for Concrete Pouring, Concrete Cutting, and Asphalt Application at Temporary Sites ........................................................................................................ 3-79 |
| S439 | BMPs for Manufacturing and Post-processing of Metal Products ................................... 3-81 |
| S440 | BMPs for Painting, Finishing, and Coating of Vehicles, Boats, Buildings, and Equipment ................................................................................................................. 3-82 |
| S441 | BMPs for Agricultural Crop Production ...................................................................... 3-84 |
3.6.4 General Source Control Best Management Practices ........................................ 3-100
3.6.5 Best Management Practices for Single-Family Residences ..............................3-111

Chapter 4 – Maintenance Standards for Stormwater Facilities

4.1 Inspection and Maintenance Responsibility ............................................................4-1
4.2 Stormwater Facility Maintenance Programs .........................................................4-1
  4.2.1 Preparing a Stormwater Facility Maintenance Program ................................4-1
4.3 Stormwater Maintenance Standards ....................................................................4-3
  4.3.1 Components Requiring Maintenance ...............................................................4-3
  4.3.2 Inspection and Maintenance Intervals .............................................................4-4
  4.3.3 Level of Service for Stormwater Facilities ....................................................4-4
4.4 Vegetation Management .......................................................................................4-5
  4.4.1 General Guidelines .........................................................................................4-5
  4.4.2 Vegetation and Pest Management in Stormwater Facilities .............................4-6
  4.4.3 Use of Appropriate Plants .............................................................................4-6
  4.4.4 Habitat in Stormwater Facilities ...................................................................4-6
  4.4.5 Soil and Vegetation Protection Areas .............................................................4-6
  4.4.6 Warranty and Facility Acceptance by the City of Olympia ............................4-6

## Volume V
**Stormwater Treatment BMPs**

### Chapter 1 - Introduction

1.1 Purpose of this Manual ................................................................. 1-1  
1.2 Content and Organization of this Volume ........................................ 1-1  
1.3 How to Use this Volume ............................................................... 1-1  
1.4 Runoff Treatment Facilities .......................................................... 1-2  
1.4.1 General Considerations ............................................................ 1-2  
1.4.2 Maintenance .................................................................................. 1-2  
1.4.3 Treatment Methods ....................................................................... 1-2  

### Chapter 2 - Treatment Facility Selection Process

2.1 Step-by-Step Selection Process for Treatment Facilities ......................... 2-1  
2.2 Other Treatment Facility Selection Factors ........................................... 2-7  

### Chapter 3 - Treatment Facility Menus

3.1 Guide to Applying Menus ................................................................. 3-1  
3.2 Oil Control Menu ............................................................................. 3-1  
3.3 Phosphorus Treatment Menu ............................................................ 3-2  
3.4 Enhanced Treatment Menu ............................................................... 3-4  
3.5 Basic Treatment Menu ..................................................................... 3-5  

### Chapter 4 - General Requirements for Stormwater Facilities

4.1 Design Volume and Flow .................................................................... 4-1  
4.1.1 Water Quality Design Storm Volume ............................................ 4-1  
4.1.2 Water Quality Design Flow Rate .................................................. 4-1  
4.1.3 Flows Requiring Treatment .......................................................... 4-2  
4.1.4 Minimum Treatment Facility Size ................................................ 4-3  
4.2 Sequence of Facilities ...................................................................... 4-3  
4.3 Setbacks, Slopes, and Embankments ................................................ 4-4  
4.3.1 Setbacks ....................................................................................... 4-4  
4.3.2 Side Slopes and Embankments ...................................................... 4-5  
4.4 Facility Liners .................................................................................. 4-5  
4.4.1 General Design Criteria ............................................................... 4-5  
4.4.2 Design Criteria for Treatment Liners ............................................ 4-7  
4.4.3 Design Criteria for Low Permeability Liner Options ....................... 4-7  
4.5 Hydraulic Structures ....................................................................... 4-9  
4.5.1 Flow Splitter Designs .................................................................... 4-9  
4.5.2 Flow Spreading Options .............................................................. 4-13  
4.5.3 Outfall Systems ............................................................................ 4-19
Chapter 5 - On-Site Stormwater Management

5.1 Purpose .................................................................................................................. 5-1
5.2 Application .............................................................................................................. 5-1
5.3 Best Management Practices for On-Site Stormwater Management ..................... 5-1
   5.3.1 On-site Stormwater Management BMPs ......................................................... 5-1
      BMP T5.10A Full Infiltration ............................................................................... 5-2
      BMP T5.10B Downspout Dispersion Systems ..................................................... 5-2
      BMP T5.10C Perforated Stub-out Connections ................................................. 5-2
      BMP T5.11 Concentrated Flow Dispersion ....................................................... 5-3
      BMP T5.12 Sheet Flow Dispersion .................................................................... 5-5
      BMP T5.13 Post-Construction Soil Quality and Depth ....................................... 5-7
      BMP T5.14A Rain Gardens .................................................................................. 5-10
      BMP T5.14B Bioretention .................................................................................... 5-12
      BMP T5.15 Permeable Pavements ...................................................................... 5-13
      BMP T5.16 Tree Retention and Tree Planting .................................................... 5-23
      BMP T5.17 Vegetated Roofs ............................................................................... 5-26
      BMP T5.18 Reverse Slope Sidewalks .................................................................. 5-28
      BMP T5.19 Minimal Excavation Foundations ................................................... 5-29
      BMP T5.20 Rainwater Harvesting ....................................................................... 5-30
      BMP T5.30 Full Dispersion .................................................................................. 5-31
   5.3.2 Site Design BMPs ............................................................................................. 5-38
      BMP T5.40 Preserving Native Vegetation .......................................................... 5-39
      BMP T5.41 Better Site Design ............................................................................. 5-40

Chapter 6 – Pre-Treatment Facilities

6.1 Purpose .................................................................................................................. 6-1
6.2 Application .............................................................................................................. 6-1
6.3 Best Management Practices (BMPs) for Pretreatment ........................................... 6-1
      BMP T6.10 Presettling Basin .............................................................................. 6-2

Chapter 7 - Infiltration and Bio-infiltration Facilities

7.1 Purpose .................................................................................................................. 7-1
7.2 General Considerations ......................................................................................... 7-1
7.3 Applications .......................................................................................................... 7-1
7.4 Best Management Practices (BMPs) for Infiltration and Bioretention Treatment...... 7-2
      BMP T7.10 Infiltration Basins ............................................................................. 7-2
      BMP T7.20 Infiltration Trenches ......................................................................... 7-2
      BMP T7.30 Bioretention Cells, Swales, and Planter Boxes .................................. 7-3
      BMP T7.40 Compost-amended Vegetated Filter Strips (CAVFS) ....................... 7-24
Chapter 8 - Filtration Treatment Facilities ................................................................. 8-1
  8.1 Purpose .................................................................................................................. 8-1
  8.2 Description ............................................................................................................ 8-1
  8.3 Performance Objectives ....................................................................................... 8-1
  8.4 Applications and Limitations .............................................................................. 8-2
  8.5 Best Management Practices (BMPs) for Sand Filtration .............................. 8-2
      BMP T8.10: Basic Sand Filter Basin .................................................................. 8-2
      BMP T8.11: Large Sand Filter Basin ................................................................. 8-15
      BMP T8.20: Sand Filter Vault ........................................................................... 8-16
      BMP T8.30: Linear Sand Filter ......................................................................... 8-20
      BMP T8.40: Media Filter Drain (previously referred to as Ecology Embankment) .... 8-22

Chapter 9 - Biofiltration Treatment Facilities ........................................................... 9-1
  9.1 Purpose .................................................................................................................. 9-1
  9.2 Applications .......................................................................................................... 9-1
  9.3 Site Suitability ....................................................................................................... 9-1
  9.4 Best Management Practices ................................................................................ 9-1
      BMP T9.10 Basic Biofiltration Swale ................................................................. 9-2
      BMP T9.20 Wet Biofiltration Swale ................................................................. 9-20
      BMP T9.30 Continuous Inflow Biofiltration Swale ...................................... 9-23
      BMP T9.40 Basic Filter Strip ............................................................................. 9-24

Chapter 10 - Wetpool Facility Designs ..................................................................... 10-1
  10.1 Purpose ................................................................................................................. 10-1
  10.2 Application .......................................................................................................... 10-1
  10.3 Best Management Practices (BMPs) for Wetpool Facilities .......................... 10-1
      BMP T10.10 Wetponds - Basic and Large .................................................... 10-2
      BMP T10.20 Wetvaults ..................................................................................... 10-18
      BMP T10.30 Stormwater Treatment Wetlands .............................................. 10-24
      BMP T10.40 Combined Detention and Wetpool Facilities ........................... 10-31

Chapter 11 - Oil and Water Separators ..................................................................... 11-1
  11.1 Purpose of Oil and Water Separators ............................................................... 11-1
  11.2 Description .......................................................................................................... 11-1
  11.3 Performance Objectives .................................................................................... 11-5
  11.4 Applications/Limitations .................................................................................... 11-5
  11.5 Site Suitability ..................................................................................................... 11-5
  11.6 Design Criteria-General Considerations ......................................................... 11-5
  11.7 Oil and Water Separator BMPs ........................................................................ 11-6
      BMP T11.10 API (Baffle type) Separator Bay .................................................. 11-7
      BMP T11.11 Coalescing Plate (CP) Separator Bay .......................................... 11-9
Chapter 12 - Emerging Technologies

12.1 Background ........................................................................................................... 12-1
12.2 Ecology Role in Evaluating Emerging Technologies ............................................. 12-1
12.3 Evaluation of Emerging Technologies .................................................................. 12-1
12.4 Assessing Levels of Development of Emerging Technologies............................ 12-2
12.5 Emerging Technologies for Stormwater Treatment and Control Options .......... 12-2

Table 2.2.1 Screening Treatment Facilities Based on Soil Type ................................. 2-8
Table 3.3.1 Treatment Trains for Phosphorus Removal .............................................. 3-3
Table 3.4.1 Treatment Trains for Dissolved Metals Removal ..................................... 3-5
Table 4.2.1 Treatment Facility Placement in Relation to Detention ............................... 4-4
Table 4.4.1 Lining Types Recommended for Runoff Treatment Facilities .................. 4-6
Table 4.4.2 Compacted Till Liners .............................................................................. 4-7
Table 4.5.1 Rock Protection at Outfalls ....................................................................... 4-14
Table 5.3.1 Flow Control Credits for Retained Trees ..................................................... 5-24
Table 5.3.2 Flow Control Credits for Newly Planted Trees ........................................ 5-25
Table 7.4.1 General Guideline for Mineral Aggregate Gradation ............................... 7-14
Table 8.5.1 Sand Medium Specification .................................................................... 8-5
Table 8.5.2 Clay Liner Specifications ......................................................................... 8-6
Table 8.5.3 Western Washington Design Widths for Media Filter Drains .................... 8-30
Table 8.5.4 Media Filter Drain Mix ............................................................................. 8-33
Table 9.4.1 Sizing Criteria ......................................................................................... 9-4
Table 9.4.2 Guide for Selecting Degree of Retardance ............................................... 9-11
Table 9.4.3 Grass Seed Mixes Suitable for Biofiltration Swale Treatment Areas .......... 9-17
Table 9.4.4 Groundcovers and Grasses Suitable for the Upper Side Slopes of a Biofiltration Swale in Western Washington .............................................................. 9-17
Table 9.4.5 Recommended Plants for Wet Biofiltration Swale .................................... 9-22
Table 10.3.1 Emergent Wetland Plant Species Recommended for Wetponds .......... 10-13
Table 10.3.2 Distribution of Depths in Wetland Cell ...................................................... 10-26
Table 12.5.1 TAPE Treatment Goals and Water Quality Parameters ............................ 12-5
